### Introduction

MPM416WK Submersible Level Transmitters use high performance piezoresistive pressure sensor as sensing elements. It measures liquid static pressure accurately which is positive proportional to liquid depth, transmitting pressure signal into standard current/voltage output signal by amplifier circuit board. The product has high accuracy, compact size and easy operation characteristics, and it can be submersible into the liquid to measure level from transmitter bottom to liquid surface. It is widely used for the liquid measure and control of both petroleum, chemi-industry, power station, city water supply and drainage and hydrology.

### Load Characteristic

2-wire

4mA~20mADC output

15V~30VDC power supply

$$R_L \leq \frac{U_n - 15V}{20mA} \times 10^3 (\Omega)$$

## Notes

1. Please pay attention if the media is compatible with contacting material, especially pay attention to media density at measuring situation (except water);
2. We provide the user with PVC or polyurethane cable; polyurethane cable is more flexible and wearable. If the user has no special requirements, the default would be PVC cable;
3. If the product is installed in lightning and thunder area, please note "lightning Protection" in the order; we suggest to use lightning protection device to make sure power is grounding safely;
4. When MPM416WK transmitter's armoured tube more than 2m, we would provide the user with divided steel tube to help delivery. Please install tubes in local place;
5. If the user has special requirement, please feel free to contact with our company.
